## ALLOWANCE

Claims 1-10, 32-37, and 42 were rejected in the Office Action entered on 27 February 2008.

Applicants' submission on 20 June 2008 has amended claims 1, 2, 32, and 42. Claims 5, 9, 11-31, 35, 38, 41, and 43-44 have been canceled. Claims 1-4, 6-8, 10, 32-34, 36-37, and 42 are pending.

Claims 1-4, 6-8, 10, 32-34, 36-37, and 42 are allowed.

### *Reasons for Allowance*

The following is an examiner's statement of reasons for allowance:

Applicants' specification provides the following definitions for "virtual" and "non-virtual" as used in the claim language:

In Simulink.RTM. and other graphical modeling environments, the nodes, blocks or other model components used to model a dynamic system are generally either "virtual", meaning the blocks play no active role in a simulation or "nonvirtual", meaning the blocks play an active role in simulating a system represented by the graphical model. Virtual blocks are merely used to organize a graphical model graphically, while nonvirtual blocks represent elementary dynamic systems that affect the model's behavior. A virtual block is provided for graphical organizational convenience and plays no role in the definition of the system of equations described by the block diagram model. (Specification, page 3)

Applicants' remarks submitted on 20 June 2008 provides the following definitions:

*Data type* refers to "an internal representation of data on a computer system," such as "Boolean, 16-bit integers, fixed-point, double" (Specification, page 14, paragraph 2, lines 12-14). *Complexity* refers to "whether the values comprising each signal are complex or real numbers" (Specification, page 17, paragraph 2, lines 25-27).

Applicants' remarks submitted on 20 June 2008 have been fully considered in light of the amended claim language and found persuasive. In particular, Applicants point out that the closest prior art references of record fail to teach or suggest the claimed limitations:

(Claim 1) [...] a graphical modeling environment that uses information in the graphical model to simulate behavior of the dynamic system over a specified period of time; [forming a bus signal by grouping a first and second data signal of different signal types; and] performing an operation on the bus signal with the non-virtual operation block.

Claims 32 and 42 recite similar limitations.

These features are not fairly taught or suggested by the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
